16.2.6 System Environment

LOLA and LOLA Procedures resides on an IBM 3090 Mainframe and runs under MVS/ESA. CICS. and DB2.

The software units that comprise the LOLA Application have been created using the COBOL generator called Application Productivity software (APS). APS has been used to build the screens and provide the processing capabilities the end-user employs.

The software units that comprise the LOLA Procedures application have been created using two products: Inquire/Text and Tutor/GT. Inquire/Text has been used to build the screens and provide the processing capabilities the End-User employs. Tutor/GT has been used to provide the processing capabilities of the on-line help features.

This environment supports multiple remote access terminals around the world.

    a. Hardware Required. The hardware required by LOLA and LOLA Procedures end-users makes-up a workstation. The work stations may be local or remote and are composed of the following units:

        (1) a terminal or a micro computer (connected to the central computer at DLSC)

        (2) a keyboard

        (3) a printer (the printer may be shared with other workstations and as such be placed in a central location)

    b. Software Required. The software used by LOLA and LOLA Procedures is installed and maintained by DLSC, Federal Center, Battle Creek, Michigan. Kermit is needed at the PC level for downloading data.

16.2.7 Contingencies and Alternate Modes of Operation. Contingency protocol in the event of a system failure/slow down (LOGRUN) is as follows:
